RISE UP!
The 2021 Fall Take Action Program tackles Climate Change to support Emperor Penguins.

ENTREPRENEURS TAKING ACTION

SUPPORT EMPEROR PENGUINS! Arctic sea ice is expected to disappear by 2050 as it's warming twice as fast as the rest of the earth due to climate change. Penguins in the Antarctic have experienced significant sea ice declines in recent years, too. Increasing levels of carbon dioxide (CO2) in the air traps heat in our atmosphere and raises temperatures, melting the ice that penguins need for breeding, feeding and melting. Trees can absorb one ton of CO2 in their lifetime, making tree planting and conservation an important step in protecting emperor penguins from extinction.

By choosing to
PLANT TREES instead of choosing rewards,
girls impact climate change and spread the word about
the need to protect penguins.

ONETREEPLANTED and GSNorCal are partnering to
plant donated trees in northern California.

Go Paperless
Let our trees do
their part absorbing
CO2, not being turned
into paper

Recycle More
Annual household
waste equals 4800 lbs of CO2

Save Electricity
turn off computers
and save thousands
of lbs of CO2 per year

Reduce Food Waste
average school
lunch equals 67 lbs of
package waste
per year

Drive Less
1 gallon of gas equals
20 lbs of CO2

HELP ME IMPACT CLIMATE CHANGE

cuteness!

FUN FACTS ABOUT EMPEROR PENGUINS
- They are the largest of ALL birds and the largest of 18 penguin species
at 3-4 feet tall and 55-100 lbs.
- They waddle at a speed of 1.5 mph
and swim between 6-9.5 mph.
- They dive deeper than any other
bird or penguin, up to 1,800 feet.
- They can hold their breath up to 22
minutes!
- They breed annually, June-August,
when air temperature may drop to
-76°F and winds may reach 124 mph.
- Females lay only one egg annually.
- Males stand and protect the egg for
two months before it hatches by
balancing it on their feet and covering
it with a brood pouch.
